MATTHEW BARONDEAU

mebarondeau@utexas.edu • (979) 204-6435

EDUCATION

Ph.D. in Electrical and Computer Engineering   August 2022 – Present
University of Texas at Austin
Advisor: Dr. Andreas Gerstlauer

M.S. in Electrical and Computer Engineering   August 2020 - May 2022
University of Texas at Austin; GPA 3.86/4.00

B.S. in Electrical and Computer Engineering   August 2016 - May 2020
University of Texas at Austin; GPA 3.79/4.00

WORK EXPERIENCE

UT ECE – Graduate Research Assistant   August 2020 – Present
- Investigating near-data accelerator multiprocessing optimizations for streaming workloads

Tactical Computing Laboratory – Research Engineer I   May 2021 – August 2021
- Profiled communication overhead in SST and created asynchronous execution framework for accelerator network

ARM – CPU Performance Intern   May 2020 – August 2020
- Correlated MMU and L2 transactions in RTL and performance model on ARM microprocessors

UT ECE Department –Teaching Assistant   August 2017 – May 2020, May 2022
- Instructed students in embedded systems and real-time operating systems courses

Lockheed Martin Missiles and Fire Control – Electrical Engineering Intern   June 2019 – August 2019
- Designed fiber-optic communication and power controller interfaces

Applied Research Laboratories – Student Technician   May 2018 – August 2018
- Created and tested Verilog RTL designs for GPS processing Xilinx Virtex system

Reynolds and Reynolds – IT Operations Intern   Summer 2014 – 2017
- Repaired computers and installed security infrastructure at College Station office

PROJECTS

Analysis of Prefetcher Interaction with Run-ahead Execution   Spring 2022
- Compared precise runahead execution against prefetcher combinations using SCARAB simulator

TinyYolo Acceleration   Fall 2021
- Optimized TinyYolo on Ultra96 using code transformations and hardware accelerator,
- Resulted in 40x inference speedup over baseline

Parallelization of the Barnes-Hut Algorithm   Spring 2021
- Parallelized Barnes-Hut using openMP and GPU giving 11x speedup over CPU baseline

Self-Monitor Stress Device   Fall 2019 – Spring 2020
- Read physiological data to detect stress through sensors and processed using analog filters on PCB
- Communicated information to mobile application via Bluetooth before processing in ML model
- Awarded 2nd place in honors senior-design project category

AES Hardware Accelerator   Fall 2019
- Achieved 1.4x speedup on CTR AES using hardware accelerator for Zedboard SoC

RTOS Autonomous Racing Car   Spring 2019
- Wrote real-time operating system for TI TM4C including file system, process loader, and priority scheduler
- Interfaced IR and laser sensors and tuned PID control algorithm to navigate racetrack

RELEVANT COURSEWORK

- EE382M VLSI I
- EE382N Advanced Embedded MCU
- EE382N Parallelism & Locality
- CS380C Compilers
- EE382V Semiconductor Memories
- EE382N High Speed Computer Arithmetic
- EE382M System on Chip Design
- CS395T Prediction Mechanisms in Computer Architecture
- EE445M Real-Time Operating Systems
- EE460N Computer Architecture

SERVICE ACTIVITIES

UT First Year Program – Fig Facilitator   Fall 2021- Present
Eta Kappa Nu Psi Chapter– Member   Fall 2019 – Spring 2021
UT First Year Program – Fig Mentor   August 2017 – December 2019

SKILLS

- **Programming Languages:** ARM Assembly, C, C++, CUDA, Python, Verilog
- **Tools and frameworks:** LLVM, Vivado, gem5

HONORS

- Virginia & Ernest Cockrell Jr. Fellowship in Engineering
